EXPERIENCE

WNS-VURAM

Mar 2025 – Jul 2025

AI Research Developer Intern

Bengaluru, India

- Built an automated BRD-to-Jira pipeline with priority extraction, parsing requirement documents to generate structured projects (epics, user stories, tasks) with assigned owners and priorities.
- Conducted in-depth research and feasibility analysis on Firecrawl (FIRE-1 agent) as an alternative to traditional RPA tools, evaluating cost, scalability, and end-to-end automation capabilities.
- Designed and implemented agentic multi-agent workflows using LangGraph, UiPath, and Maestro, enabling intelligent task orchestration with minimal human intervention (human-in-the-loop systems).
- Developed a HIPAA-compliant medical insurance AI system that analyzes doctor-patient transcripts to recommend applicable insurance codes and generate structured medical reports, streamlining medical coding workflows.

PROJECTS

Dipti's AI PERSONA

Tech: React.js, FastAPI, Python, OpenAI API, RAG, OpenAI Embeddings, Vapi, Twilio, Cal.com, REST APIs

- Built and deployed an AI-powered digital persona (Dipti's AI Persona) using React, FastAPI, OpenAI, Vapi, and Cal.com, enabling recruiters to interact with candidate information through text and voice interfaces.
- Implemented a Retrieval-Augmented Generation (RAG) pipeline using OpenAI embeddings and semantic search to provide grounded responses from resumes, projects, and portfolio knowledge while minimizing hallucinations.
- Developed an agentic workflow with tool-calling, intent routing, and automated interview scheduling, integrating external APIs for recruiter coordination and calendar management.
- Integrated Vapi and Twilio to enable real-time voice interactions, implementing interruption handling for seamless and natural recruiter conversations.

TalentSearch AI

Tech: Python, OpenAI, Pinecone, Streamlit, LangChain, Google Sheets API, Google Drive API, PyPDF2, REST APIs

- Built and deployed an AI-powered hiring assistant (link) using RAG and LLM agents for semantic resume retrieval, ranking, and analysis.
- Built a Pinecone-based vector search pipeline with agentic LLM workflows for dynamic candidate search and shortlisting.
- Reduced LLM usage by combining scoring and summarization, improving cost efficiency and response latency.

EDUCATION

Scaler School of Technology

Jul 2023 – Present

Undergraduate Program in Computer Science

Bengaluru, India

- Current CGR (equivalent to CGPA): **7.83**

BITS Pilani (in association with Coursera)

Jul 2023 – Present

B.Sc. (Hons.) in Computer Science

Bengaluru, India

- Current CGPA: **7.9**

TECHNICAL SKILLS

Languages	Python, Java, JavaScript, SQL
Backend & Frameworks	Flask, Node.js, Express.js, React.js, Streamlit
AI & Automation	LangChain, LangGraph, RAG, Prompt Engineering, Agentic AI, UiPath, n8n
Databases	MongoDB, Pinecone
Core Concepts	REST APIs, Multi-Agent Systems, Vector Search
Tools	Git, GitHub, Google Sheets API, Google Drive API

VOLUNTEERING

Placement Committee, Scaler School of Technology

Sep 2024 – Aug 2025

Secretary of Placement Cell

Bengaluru, India

- Managed student placement profiles and coordinated communication between recruiters and students for smooth hiring operations.
- Collaborated with industry partners and placement teams to streamline placement-related activities and data management.
