EXPERIENCE

WNS-VURAM

March 2025 – July 2025

AI Research Developer Intern

Bengaluru, India

- Built an automated BRD-to-Jira pipeline with priority extraction, parsing requirement documents to generate structured projects (epics, user stories, tasks) with assigned owners and priorities.
- Conducted in-depth research and feasibility analysis on Firecrawl (FIRE-1 agent) as an alternative to traditional RPA tools, evaluating cost, scalability, and end-to-end automation capabilities.
- Designed and implemented agentic multi-agent workflows using LangGraph, UiPath, and Maestro, enabling intelligent task orchestration with minimal human intervention (human-in-the-loop systems).
- Developed a HIPAA-compliant medical insurance AI system that analyzes doctor-patient transcripts to recommend applicable insurance codes and generate structured medical reports, streamlining medical coding workflows.

PROJECTS

Production-Grade Retail Data Platform using Spark & Hive

- Designed and built a 3-layer data platform (Raw, Staging, Analytics) on HDFS using Hive and PySpark, enabling centralized processing of multi-source retail datasets (orders, customers, payments, inventory, clickstream).
- Developed data cleaning and transformation pipelines in PySpark, handling duplicates, nulls, schema standardization, and business rule validations; implemented partitioning and joins to optimize performance and enrich datasets.
- Built a star schema data model (fact + dimension tables) and generated business insights (CLV, AOV, top products, revenue trends), improving analytical readiness and query efficiency.

TalentSearch AI

Tech: Python, OpenAI, Pinecone, Streamlit, LangChain, Google Sheets API, Google Drive API, PyPDF2, REST APIs

- Developed an AI-powered hiring assistant using RAG and LLM agents for semantic resume retrieval, ranking, and analysis.
- Built a Pinecone-based vector search pipeline with agentic LLM workflows for dynamic candidate search and shortlisting.
- Reduced LLM usage by combining scoring and summarization, improving cost efficiency and response latency.

EDUCATION

Scaler School of Technology

Jul 2023 – Present

B.Sc. & M.Sc. in Computer Science

Bengaluru, India

- Current CGR (equivalent to CGPA): **7.7**

BITS Pilani (*in association with Coursera*)

Jul 2023 – Present

B.Sc. in Computer Science

Bengaluru, India

- Current CGPA: **7.9**

TECHNICAL SKILLS

Languages & Databases

Python, Java, JavaScript, SQL, MongoDB

AI/ML & Automation

Agentic AI, RAG, Prompt Engineering, Langchain, LangGraph, UiPath

Web frameworks & Technologies

React.js, Node.js, Express.js, Git/GitHub, REST APIs, Streamlit

POSITION OF RESPONSIBILITY

Secretary of Placement Cell

Sep 2024 – August 2025

Placement Committee, Scaler School of Technology

- Managed student profiles and collaborated with industry partners, ensuring clear communication between students and recruiters for smooth placement processes.
